

COSC1200 Project

Course: 202641.11930-COSC-1200-01 - Object-Oriented Programming 1

Criteria	Excellent 3 points	Good 2 points	Needs Improvement 1 point	Incomplete 0 points	Criterion Score
General Program Functionality	All of the following are true: • Program code fully solves the problem. • Program does not crash. • Program code has not introduced errors or redundancies.	The program code runs, and mostly solves the problem. Crashes are infrequent/unusual.	The program code runs, and at least partly solves the problem. Crashes are infrequent/unusual.	Work is unsubmitted, very incomplete, does not run, crashes easily, or does not solve the problem as expected at all.	/ 3

Criteria	Excellent 3 points	Good 2 points	Needs Improvement 1 point	Incomplete 0 points	Criterion Score
Key Concept: User Interface Design	All of the following are true: • All controls required for full required functionality are present. • Appearance is generally professional or polished. • The purpose of all controls is clear (labeling, etc.). • Layout has been considered. • Font and colour choice is reasonable and accessible. • Keyboard access has been implemented for all functionality.	All of the following are true: • All controls required for full required functionality are present. • The purpose of most controls is apparent. • Layout has been considered. • Font and colour choice is accessible. • Keyboard access has been implemented for most functionality. • Tooltips are included for most components a user interacts with.	All of the following are true: • All controls required for full required functionality are present. • The application is usable with just a mouse, and with just a keyboard.	Work is unsubmitted, has multiple missing controls, or major issues with accessibility.	/ 3

Criteria	Excellent 3 points	Good 2 points	Needs Improvement 1 point	Incomplete 0 points	Criterion Score
	• Tooltips are included for all components a user interacts with.				
Key Concept: File Input and Output	All of the following are true: • The program successfully and reliably reads information from a file. • The program successfully and reliably writes information to a file. • Exceptions related to locked/missing files have been considered.	The program has file input or file output working fully and reliably with at least a start on the other.	The program's file input or file output are implemented but have problems with format or reliability.	Work is unsubmitted or has no working form of input or output.	/ 3

Criteria	Excellent 3 points	Good 2 points	Needs Improvement 1 point	Incomplete 0 points	Criterion Score
Key Concept: Class Definitions	All required classes are defined in their own files with a relevant and useful set of properties and methods. Objects are instantiated as needed and in a useful way. Variables for properties are not public. Calculations in the classes produce accurate results.	All required classes are defined in their own files with a mostly useful set of properties and methods. Objects are instantiated as needed. Few variables for properties are public. Calculations in the classes produce mostly accurate results.	Most required classes are defined across multiple files with somewhat relevant properties and methods. Objects are instantiated. Calculations in the classes produce somewhat accurate results.	Work is unsubmitted, or has multiple major issues with class definitions and/or instantiation.	/ 3

Criteria	Excellent 3 points	Good 2 points	Needs Improvement 1 point	Incomplete 0 points	Criterion Score
Key Concept: Inheritance and Exception Handling	Inheritance and exception handling are both usefully implemented as part of the submitted code solution. Inheriting classes are used to reduce code and there is no redundancy. Exceptions are not used to mask errors. Evidence suggests these concepts are understood by the student.	Inheritance or exception handling are usefully implemented as part of the submitted code solution. Evidence suggests that at least one of these concepts are understood by the student.	Inheritance or exception handling are implemented as part of the submitted code solution, without overt error or misuse.	Work is unsubmitted, does not feature inheritance or exception handling, or has significant errors/misuse with regards to inheritance and exception handling.	/ 3

Criteria	Excellent 3 points	Good 2 points	Needs Improvement 1 point	Incomplete 0 points	Criterion Score
Style Guide and Documentation	All of the following are true: • Comment header exists with name, date and description. • Classes are each defined within their own code files. • Naming conventions follow the style guide in all cases. • Spacing and block structure is consistent and follows the style guide in all cases. • Hardcoded numeric literals (e.g. for constants) are	All of the following are true: • Comment header exists with name, date and description. • Classes are each defined within their own code files. • Naming conventions follow the style guide in most cases. • Spacing and block structure is consistent and follows the style guide in most cases. • Hardcoded numeric literals (e.g. for constants)	Four of the following are true: • Comment header exists with at least a name and date. • Classes are each defined within their own code files. • Naming conventions follow the style guide in most cases. • Spacing and block structure follows the style guide in most cases. • Any code based closely on outside sources has	Work is unsubmitted, the student's name is missing, or fewer than three of the following are true: • Comment header exists with at least a name and date. • Naming conventions follow the style guide in most cases. • Spacing and block structure follows the style guide in most cases. • Any code based closely on outside sources has been referenced.	/ 3

Criteria	Excellent 3 points	Good 2 points	Needs Improvement 1 point	Incomplete 0 points	Criterion Score
	mostly avoided. Any code based closely on outside sources has been referenced.	are partly avoided. Any code based closely on outside sources has been referenced.	been referenced.		

Criteria	Excellent 3 points	Good 2 points	Needs Improvement 1 point	Incomplete 0 points	Criterion Score
Ongoing Work and Submission	Work was submitted to DC Connect and provided via GitHub. There is evidence of Git commits over more than one week. In class, students either had progress that showed clear understanding of project concepts and/or asked useful questions.	Work was submitted to DC Connect, and provided via GitHub. There is evidence of Git commits over at least a week. In class, students either showed some progress, showed fair understanding of project concepts, or relevant questions.	Any of the following were true: - The work was not provided via GitHub. - GitHub commits are entirely within the last day or two. - Students were in class but demonstrated no progress, had little understanding, and asked no relevant questions.	The work was not submitted to DC Connect or the students did not discuss the project with the instructor at all.	/ 3
